## Summary

---

Dynamic and dedicated React java-script developer with 2 years of hands-on experience in building responsive and user-friendly web applications. Proficient in developing robust and scalable front-end solutions using React JS, JavaScript (ES6+), and a solid understanding of HTML/CSS. Skilled in state management using Redux and integrating with Restful APIs. Proven ability to create efficient and maintainable code, coupled with a keen eye for User Interface and User Experience. Actively engaged in the developer community, contributing to open-source projects and staying updated with the latest industry trends. A proactive problem-solver with a passion for creating intuitive and high-performance web applications. Seeking to leverage skills and experience to drive innovation and deliver exceptional user-centric solutions.

## Professional Experience

---

2023/12 – present  
Lahore, Pakistan

### React JS Developer

*Coding Pixel*

- Developed proficiency in developing RESTful APIs during my tenure at Coding Pixel.
- Acquired skills in Next.js and gained practical experience using TypeScript.
- Explored and utilized Tailwind CSS for efficient front-end styling.
- Familiarized myself with best programming practices to ensure code quality and maintainability.
- Successfully transformed Figma designs into functional React.js applications..
- Implemented form validation and creation using the Formik library to streamline development and avoid redundancy.
- Utilized Redux Toolkit and Redux Persist to persist login user data across the application, ensuring efficient data management and accessibility throughout sessions

2022/03 – 2023/11  
Lahore, Pakistan

### React JS Developer

*Rltsquare* 

- Have been working as a React Developer from **22 March 2022** till present.Learned about working with API's while working in the Company.
- Created Multiple Application that used **3rd Party API's** to fetch Data and then also performed Updating, Searching and Deleting the data.
- I also learned to work with **GraphQL** and creating server and fetching data from that server using Apollo-Client and Apollo-server.
- Moreover, I also learned about some performance enhancing hooks such as **useMemo** and **useCallback** etc.Looking to learn more about React JS
- Recently I also started working on NodeJs and created multiple projects that performed CRUD Operations.While working on those projects I learned about JWT, middlewares, Sending email while working with NodeJS, Storing media files on a public folder etc.

## Education

---

2016/10 – 2020/10  
Lahore, Pakistan

### Bachelor of Science (Computer Science)

*Government College University, Lahore*

## Skills

---

<b>React</b> React Router, Redux, Styled Components, CSS Modules, Hooks, React Apollo Client, Asynchronous Operations	● ● ● ● ●	<b>Next JS</b>	● ● ● ● ●
<b>HTML / CSS</b>	● ● ● ● ●	<b>JavaScript/ES6</b>	● ● ● ● ●
<b>Typescript</b>	● ● ● ● ●	<b>Redux/Context</b>	● ● ● ● ●
<b>Problem Solving</b>	● ● ● ● ●	<b>Debugging and Testing</b>	● ● ● ● ●
<b>NodeJS</b>	● ● ● ● ●	<b>Responsive Design</b>	● ● ● ● ●
<b>Version Control</b>	● ● ● ● ●	<b>Graphql (Apollo Client)</b>	● ● ● ● ●
<b>Restful API</b>	● ● ● ● ●	<b>Tailwind CSS</b>	● ● ● ● ●

## Certificates

---

- [Hacker Rank Front-end React JS](#)
- [HackerRank Javascript Basic](#)
- [HackerRank CSS Certificate](#)
- [Hackerrank React Basics](#)

## Projects

---

### Guide Connect [↗](#)

The project, Guide Connect, is essentially an admin panel for a website. Within this panel, the admin can view the locations added by guides and users. Additionally, the admin has access to a list of users who have contributed locations on the user side. Moreover, the admin can add new pin locations and users from the admin panel, and also has the ability to update their personal settings.

While working on the project, I gained experience in using Tailwind CSS and TypeScript. Additionally, I utilized RESTful APIs to retrieve data from a Node.js backend. This project not only enhanced my coding skills.

### Aliflaila

The project involved creating a digital book library where publishers and authors could publish their books. Users could purchase books using coins bought on the website. Users had the option to read books online or order physical copies. Schools and teachers could register on the website by purchasing suitable plans, enabling them to assign books to students. The project encompassed various user roles such as schools, teachers, parents, students, individual children, and parent-child relationships.

### Aliflaila Admin Panel

*AlifLaila: A Premier Digital Library For Kids*

While working on this project, I gained hands-on experience with Material UI. This project also sharpened my TypeScript skills, and I learned a lot about RESTful APIs. I created multiple UI elements from scratch and transformed wireframes into a fully functional website

### Interwood (PWA-Studio) [↗](#)

Interwood, a prominent Pakistani brand specializing in furniture and home decor, now boasts a Progressive Web Application (PWA) crafted by leveraging Magento and React JS. The implementation of GraphQL for request handling and data management with the server has been instrumental in the seamless operation of this PWA.

The development process encompassed meticulous analysis and management of project requirements. It involved meticulously outlining the development structure and crafting the application from the ground up. The creation of new components played a pivotal role in enhancing the application's functionality and overall user experience. The result is a sophisticated and intuitive application that offers a smooth and intelligent interface to users.

### **Darsonbol (Scandi-PWA)**

I've been involved in a UAE multi-store project developed using ScandiPWA, where my primary responsibility lies in the frontend. Utilizing ReactJS, TypeScript, and GraphQL, I've been crafting and tailoring the client-side user interfaces and incorporating various features. This involves not only creating but also customizing UI elements to ensure an engaging and seamless experience for users interacting with the platform.

### **Monument Metals**

*Support Developer*

### **Cocktail Project**

*Cocktail Description Application (SPA With Routing)*

I developed this project with a focus on delving into Single Page Application (SPA) routing while honing my skills in that area. Additionally, I integrated a search feature that efficiently filters and displays matching results. The entire application is designed to be mobile-responsive, ensuring a seamless user experience across various devices.

### **Cart Page**

*Cart Page using Redux-Toolkit*

I embarked on this project with the specific aim of comprehensively understanding Redux, a powerful state management library. Through this project, customers can effortlessly add, remove, and update items in their cart by simply clicking on corresponding buttons. Additionally, I've implemented a confirmation feature that prompts users before completely emptying their cart, ensuring a smooth and secure shopping experience.

### **Menu Website**

*Restaurant Menu Application using React hooks and Set Data Structure*

This application features a responsive menu where all items are initially displayed by default. Users have the option to select a specific category from the menu list, triggering the re-rendering of the item list to only show items belonging to the chosen category. This functionality dynamically updates the displayed items, presenting a refined and category-specific view based on the user's selection.
